Network

Notes relating to network setup, topology and flows.

Multi-site Mesh

This has taken a few forms:

- SoftEther
  - Worked for a long time, but there was always something..off about it. Never had any security issues but I always had my fears, and ultimately switched away from it despite how nice it actually was.
- ZeroTier
  - Never worked.
- Bare WireGuard
  - Worked alright but the setup was a bit janky (doubtless my own fault) and eventually switched it off
- Tailscale
  - Currently in use. Documenting my thoughts on the page linked above.
